## STREET LIGHTING PROJECTS

Bond Funds Allocation:	\$250,000
Other Funding Sources:	Road and Traffic Control Fund (amount to be determined)
Civil Consultant:	Florida Power & Light Co.

Existing street lighting serving City neighborhood roadways is provided by Florida Power & Light Co. (FPL). A street light level study performed by the City of Plantation Engineering Department several years ago for the Park East, Country Club Estates and Plantation Isles neighborhoods revealed a need for lighting improvements.

### Street Lighting Projects Location Maps

Through coordination with FPL, the City will work through each of the three neighborhoods to retrofit existing high pressure sodium (HPS) light fixtures with new light emitting diode (LED) light fixtures. Also, new LED light fixtures will be added in locations where none exist and light levels are very low.

### Project Status (as of July 23, 2018):

City of Plantation Engineering Department has coordinated with FPL to design a pilot project for retrofit of new LED street lighting along one residential street. FPL preliminary design and cost proposal from FPL is complete. Working toward completion of the pilot project by November 1, 2018. If the pilot project is successful, FPL and the City will target the start of neighborhood-wide street lighting improvements, beginning in the Park East neighborhood, as early as Spring of 2019.
